

WNV Model EDA Highlights

Andrew Bauman, PhD

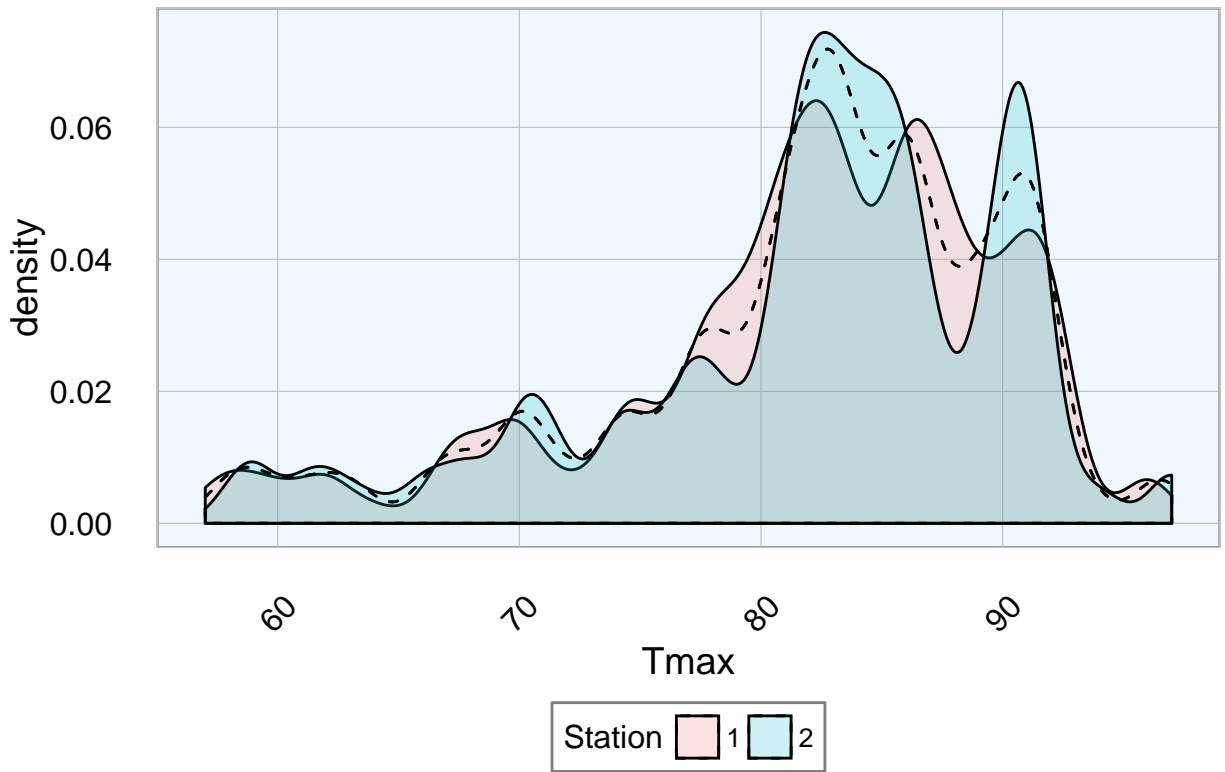

January 28, 2017

Introduction

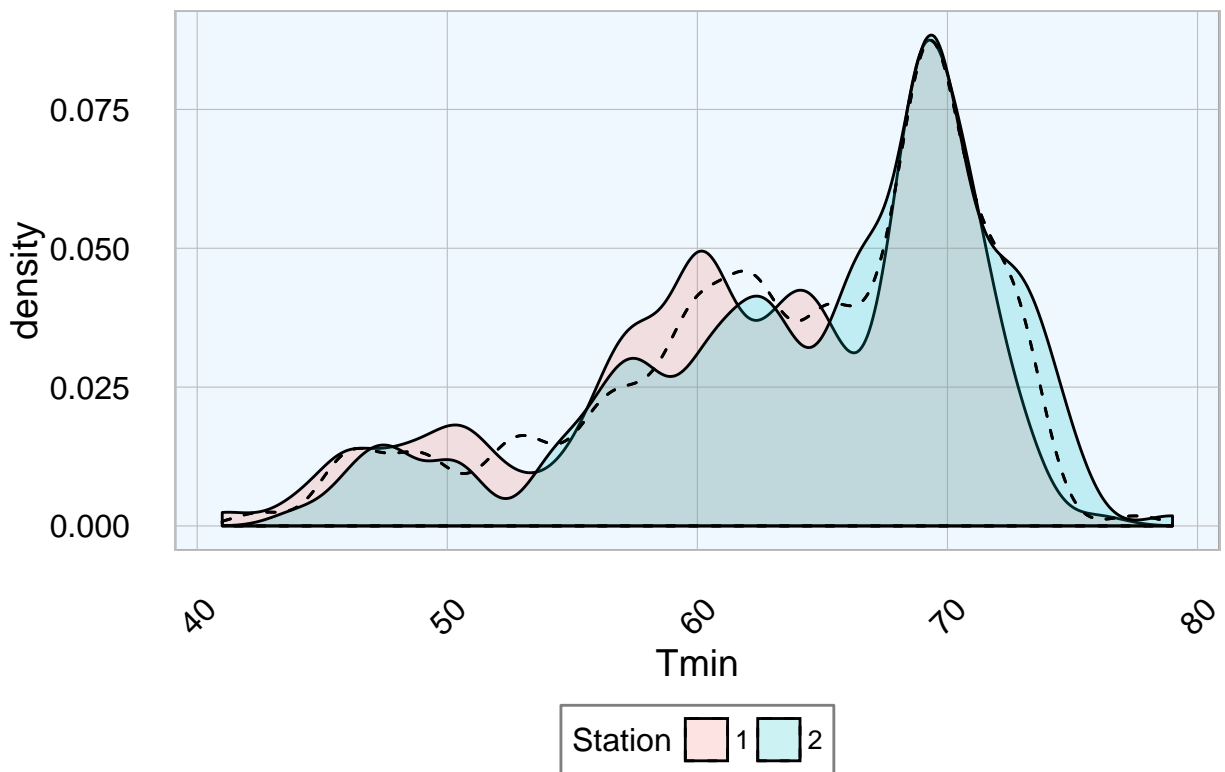

Selected Density Pots

Overlaid density plots of Tmin and Tmax by station, where the dashed plot is the mean of the station data. Note that both stations cover the same temperature range, this information is not informative of whether or not to retain data from one station over another or to use the mean. This may be informed by plots temperature vs. WNV rates or through the ML feature selection process.

Density Plot of Tmax by Station

Density Plot of Tmin by Station

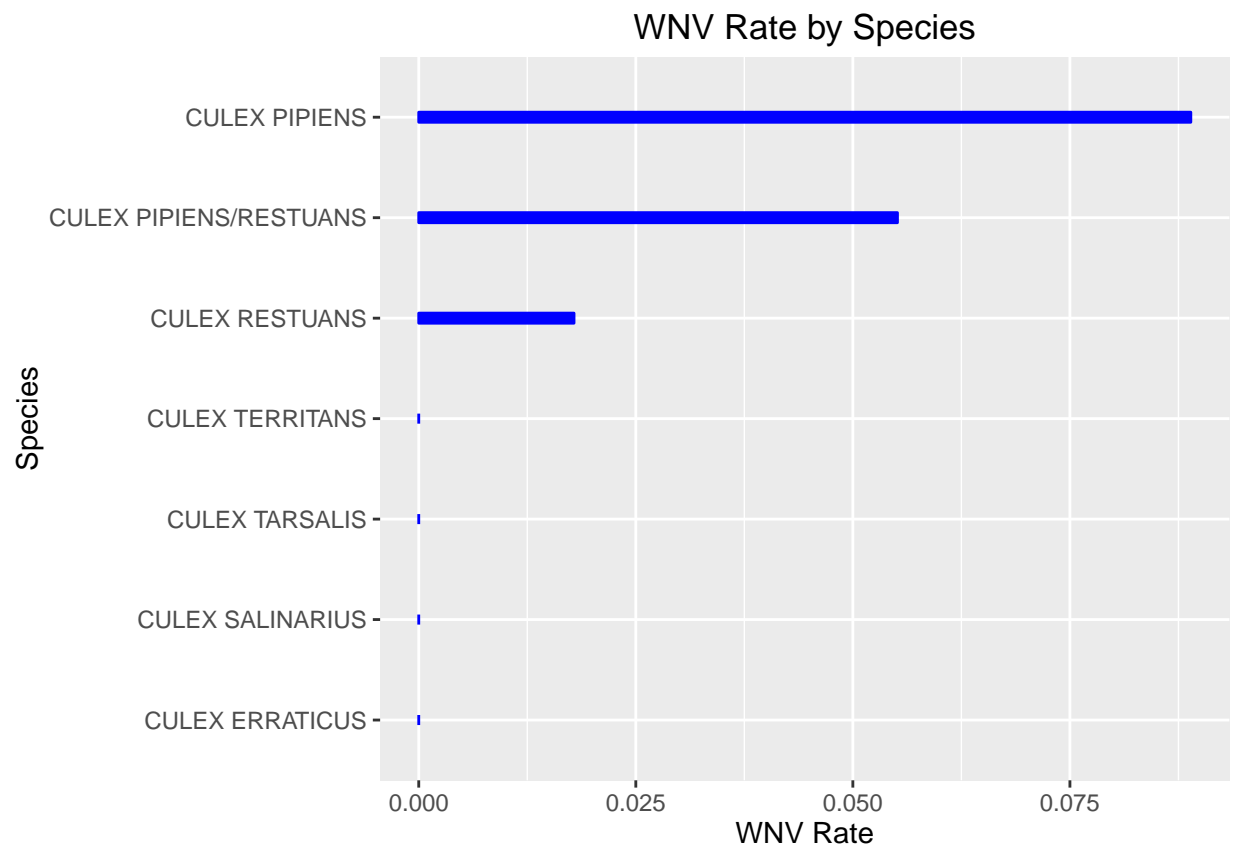

WNV Rate by Location

The plots below demonstrate a clear relationship between location and the WNV rate.

WNV Rate by Species

WNV Rate by Length of Day

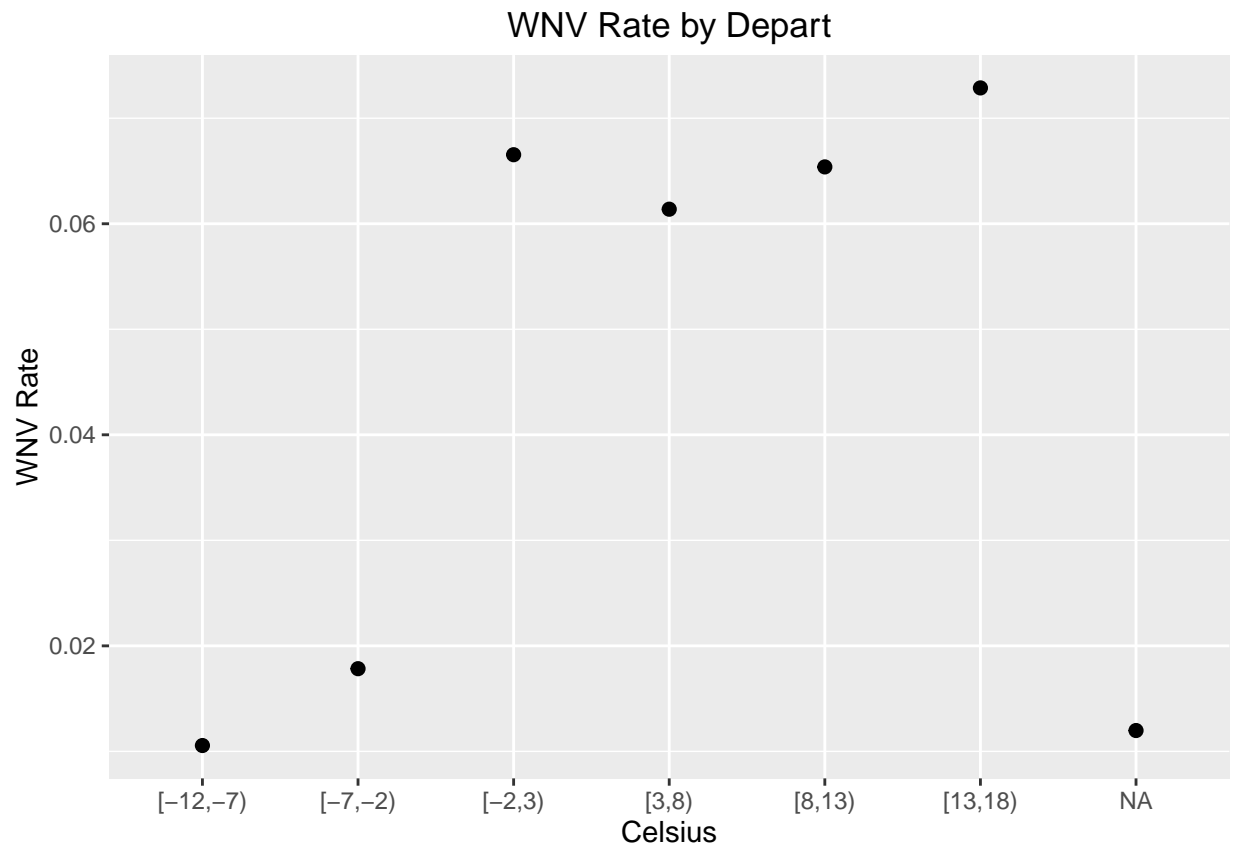

WNV Rate by Sunrise Time

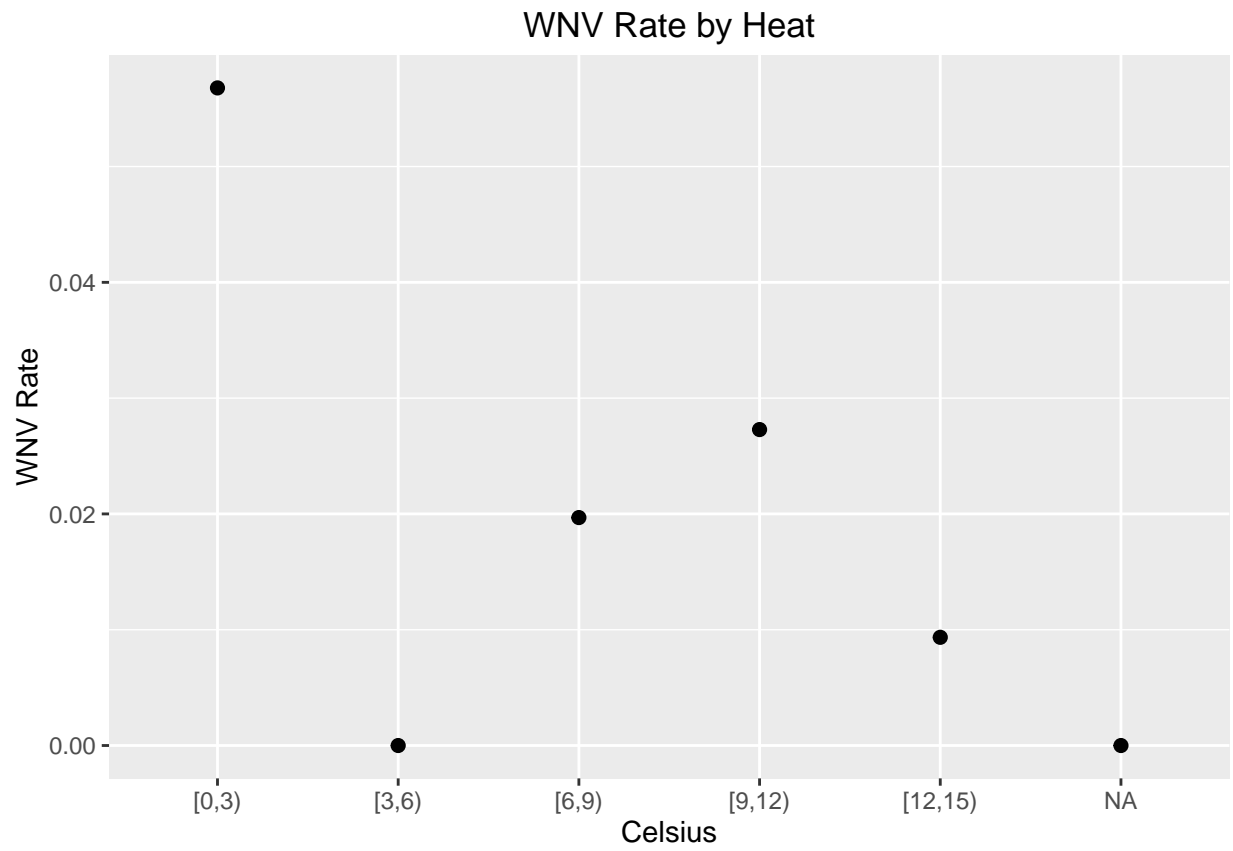

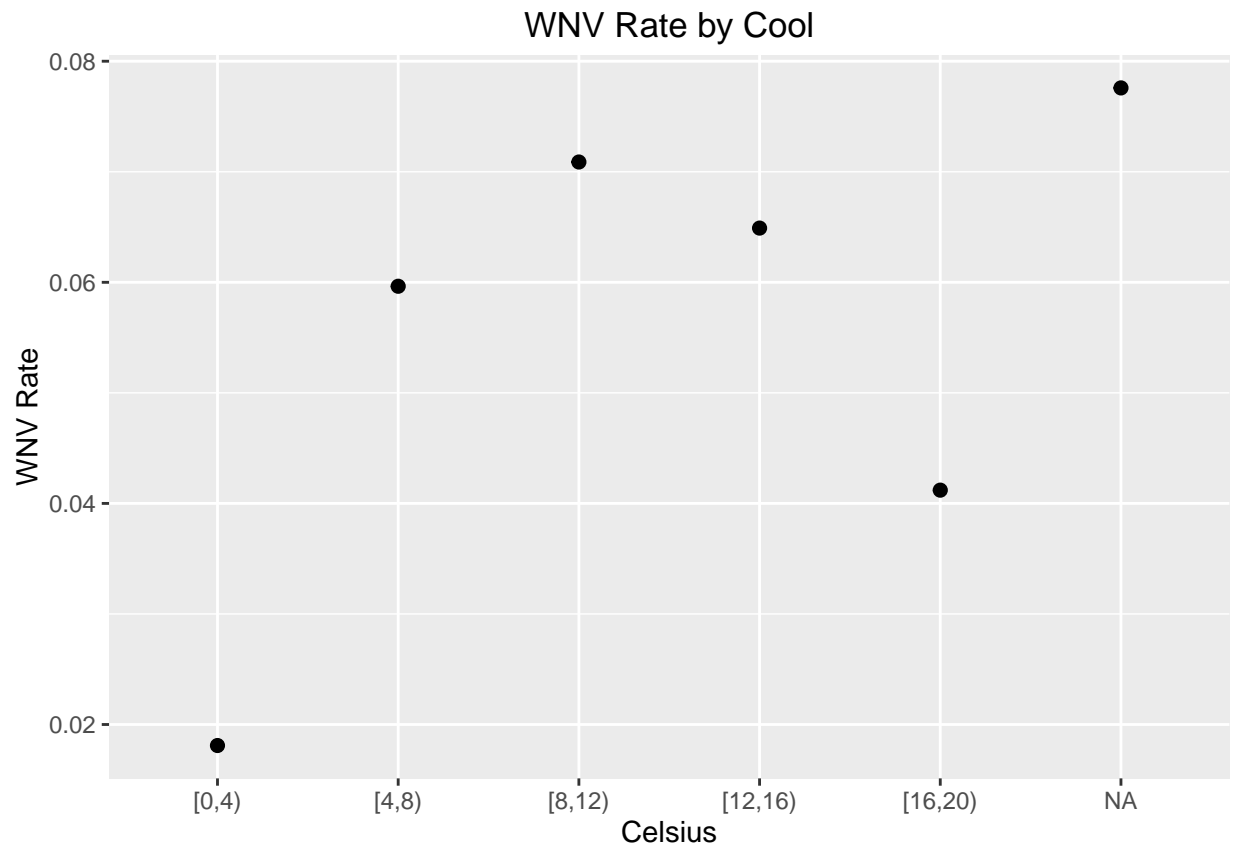

WNV Rate by Temperature Related Variables

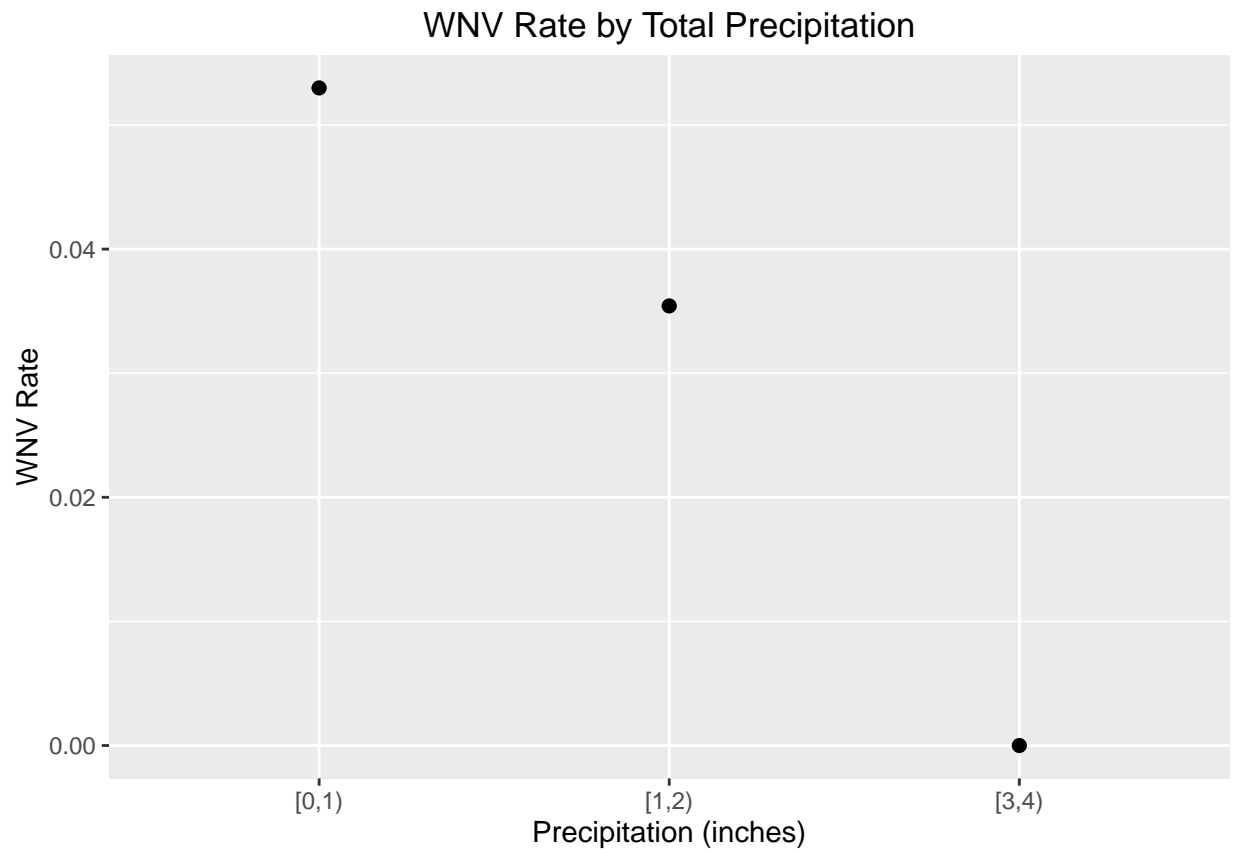

WNV Rate by Total Precipitation
